

Jordan Young Scientist Visits

The Jordan Young Scientist Team has made many visits to the several schools that took part in the pilot program to get their input and to talk about the program's strengths and areas for improvement for the upcoming years. Additionally, the JoYS team presented certified certificates to the participating students and teachers as part of their tour to the various schools.

JoYS has received a lot of positive feedback since the majority of the students and teachers are motivated to study and develop further, especially in the wake of the COIVD19 pandemic, in order to support the community's development on the scientific, economic, and social levels.

The JoYS team praised everyone for going over and beyond, they have surpassed all expectations for pioneering participation with JoYS in the pilot program.

JoYS and Embassy Team Honoring The Winners of JoYS 2022

The JoYS team was pleased to present the winning teams from Ahlyyia School, Deir Abi Saeed School, and Jubilee School with cheques during the last week of June. Teachers, students, and their parents received cash rewards, honorable plaques, and valuable certificates as rewards for their work and effort.

Because winning is a process of learning physically and intellectually every day that you work and every night that you think, this year's winners were thrilled and proud of themselves.

Both successes and shortcoming are inevitable in life. Even though some of our efforts succeed, others might not. However, that doesn't imply that we give up on our ideas. To succeed and reach the up the ranks, you need patience, tenacity, and confidence in yourself. Regardless of whether you experience strength or weakness as you work to rise to the top, it's crucial that you remain unaffected and grounded.

And while the JoYS Team is grateful for everyone who has joined us, we also think it is important to keep raising questions and developing our concepts. When one observes the wonders of science, technology, and the beautiful design of STEM it will assist and enable our community to flourish on several fronts, knowledge has its own purpose in life.

1st Place winners and their families from Jubilee School

3rd Place winner and her family from Ahlyyia School

2nd Place winners and their families from Deir Abi Saeed School

JoYS Celebration Dinner

Mr. Mohammad Tahboub, Chairperson of JoYS, and Sarah Dooley, Chargé d'Affaires, requested the pleasure of JoYS Steering Committee, Embassy of Ireland team, JoYS Judges, partners company to JoYS Celebration Dinner on 4th of July, 7 pm – 9 pm at Sheen Restaurant in Amman.

The invitees were happy and delighted to celebrate the huge success for this year, and they are looking forward to bring JoYS to the national level the next year.

Our guests shared their thoughts on ways to improve JoYS for the upcoming years and emphasized on the importance of Young Scientist in Jordan to motivate and reward young people who study, apply, and benefit from science, mathematics, engineering, and technology abilities.

Jordan Young Scientist Celebration Dinner - 4th of July

Success Story !

The highlight moment in journey through JoYS when the submission deadline drew near, lengthy sessions after school became the norm. We were usually the last to leave the school, sometimes even late at night, while other students were permitted to go home.

Everyone in our project had a role to play, and I used to take the minutes of our work meetings. This didn't require a lot of technical work on the actual project, but someone had to handle the administrative duties, and that student was always me from that point forward. This trait became a part of my personality, and you can see how it has affected my personal life positively.

JoYS have helped me to grow on the educational level which has affected my personality and my vision for my future as I am looking now for a career related to the STEM field.

Mohammad Hamdan - Student from Maadi School, Balaqa
